Hi20 MG Panel

Description

The HI20 Machine Guarding Panel ensures robust machinery safety with a durable 20x20 mm square hollow tube frame and 50x200 mm steel wire mesh, balancing visibility and security. For panels exceeding 2 meters, additional support prevents bending under force. Pre-drilled holes and 150 mm ground clearance simplify installation for various mounting methods. Available in widths from 300mm to 2000mm and heights of 1250mm or 2050mm, with 300mm extensions for added customization. Finished in durable RAL black powder coating, it combines functionality and style. Hitech also offers custom colors and finishes to meet specific requirements.

• Hot deep Galvanized (BS EN 1461) or equivalent
• Powder coated (BS EN 13438) or equivalent.

Features

• 30x30 frames Size
• Designed for medium to large scale hazards
• Smart welded
• Reinforced with central support
• 100% Strong
• 100% Tested
• 100% Strengthened
• Powder Coated
• Galvanized
• Ease of Installation
• Impact resistant
• Good color stability
